

Retail Price List

January, 1958

"SCOTT'S" BRAND is the highest quality seed available. It is carefully selected and noxious weed free. Most lots will test 98.75% pure seed or higher.

CHOICE BRAND: Choice, clean seed, low in weed content. Higher quality than is generally available at comparable prices. Top quality seed used in all mixtures.

THE SCOTT FARM SEED COMPANY warrants to the extent of the purchase price paid that, at the time of delivery, the seeds we sell are as described on the tag attached thereto within recognized tolerances. We give no further warranty, expressed or implied.

SCOTT'S A-56 Brand Alfalfa (Suggested by a SCOTT Customer) \$27.00 bu.

Winter Hardy, Disease Resistant, Rapid Regrowth

You can take advantage of the outstanding characteristics of three different alfalfa varieties—Ranger, Atlantic and Grimm. SCOTT'S A-56 Brand combines winter hardiness, disease resistance and rapid regrowth into an unsurpassed blend for hay, pasture or silage. Superior quality seed—as near perfection as nature and man can make it.

SCOTT'S Spring Pastureland Mix \$.35 lb.

Spring Pastureland Mix is a blend of the most desirable grasses and legumes to suit a variety of soil, moisture and fertility conditions as found in typical permanent pasture fields.

This mixture contains 35 per cent legumes by weight. All seeds are high in quality and germination, low in weed content and free of noxious weeds. Sow 25 lbs. per acre for a new pasture and 12-15 lbs. per acre for reseeding.

SCOTT'S Heavy Duty Pasture Mix \$.39 lb.

Twenty per cent Ranger Alfalfa and a total of 40 per cent legumes in this high yielding mixture that is also suitable for hay or first cutting silage.

SCOTT'S Heavy-Duty Mix is suggested where the field is to be left in pasture for at least five years and where heavy grazing is desired. Apply fertilizer, and lime where needed, and follow recommended seeding methods. Sow 25-30 lbs. per acre.

SCOTT'S Soil Building Mix \$16.50 bu.

A balanced legume mixture for soil building and plow under. May be used for pasture or hay. Contains Mammoth, Sweet Clover and Alfalfa. Sow 12-15 lbs. per acre.

SCOTTS Hybrid Seed Corn

SCOTTS Hybrid Corn is carefully produced and processed for vigorous, healthy, high germinating seed. It is triple-graded for trouble-free planting and treated to increase stands when soil conditions are unfavorable.

Scott Hybrids

	Maturity	Flat Grade	Quan.	\$ Amt.
SCOTTS 11	(90-95 days)	\$11.00 bu.
SCOTTS 33	(100 days)	11.00 bu.

This high yielding, early hybrid is well suited to short seasons, or may be used when regular planting is delayed. It dries fast in the field, cribs early and produces sound and solid ears. SCOTTS 11 is tops in its maturity class!

Consistently outyields everything in its class, plus beating many longer-maturing hybrids. Develops a solid, average-sized ear, and will crib ahead of fall wheat seeding. More acreage planted with SCOTTS 33 each year.

SCOTTS 66	(105 days)	\$10.00 bu.
SCOTTS 72	(110 days)	10.00 bu.

This healthy, vigorous growing hybrid gives excellent yields of good quality corn over a wide range of soil and fertility conditions. SCOTTS 66 is a dependable big producer that dries out early enough to be followed by winter wheat.

This "main crop" SCOTTS Hybrid matures right for top yields, yet early enough to harvest before bad weather. SCOTTS 72 is strongly resistant to stalk rot, blight and other diseases. An excellent crib corn that picks clean. Beautiful appearance.

SCOTTS 75	(115 days)	\$10.00 bu.
SCOTTS 99	(120 days)	10.00 bu.

Strong roots and a sturdy stalk puts SCOTTS 75 at the head of its class. Adapted to a wide range of soil and climate conditions, it is well-suited to mechanical harvest. Ears dry fast, pick easily and clean. A top crib filler that will produce good silage, too.

A fast, vigorous grower with strong roots and stalks that yields big ensilage tonnage or excellent crib corn. SCOTTS 99 is an all-around top production favorite that dries out rapidly in the field, picks clean and cribs nicely. Not as tall as U. S. 13.

One of the problems of oats production is the susceptibility or resistance of varieties to different races of stem rust. Clinton 59 and Clintland are susceptible to race 7 although resistant to race 8 of rust. New varieties differing in rust resistance help prevent a build-up of any particular rust and lessen the possibility of widespread loss in yields.

NEWTON—An Indiana variety comparing closely to Clintland and Clinton 59 in maturity and performance. Has yielded fully as well as Clinton 59 in average years but has been much superior in hot or dry seasons. It is high in test weight and resistant to race 7 of stem rust.

CLARION—Developed in Iowa as a cross between Clinton and Marion. It has been consistently high in yield and bushel weight, is medium in maturity, and ranked third in Ohio yield tests over the past four years. Resistant to race 7 stem rust.

RODNEY—Is a Canadian variety high in test weight and yielding ability, and about a week later than Clintland in maturity. It is resistant to both race 7 and 8 of stem rust but is susceptible to crown rust and race 7A stem rust. It ranked first in yield in Ohio tests averaged over the past four years.

Clintland, Clinton 59, Andrew, Ajax, Garry, Namaha and other good varieties are recommended in many states. Where oats acreage is large or where several fields are to be sown, use varieties with differing resistance to rust or other diseases.
